TIGHT-LACING,

FOUNDED ON

PHYSIOLOGY AND PHRENOLOGY:

OR,

THE EVILS

INFLICTED ON MIND AND BODY, BY

COMPRESSING THE ORGANS OF ANIMAL LIFE,

THEREBY RETARDING AND ENFEEBLING

THE VITAL FUNCTIONS.

ILLUSTRATED WITH CUTS

BY O. S. FOWLER, ✓

AUTHOR OF FOWLER'S PHRENOLOGY, HEREDITARY DESCENT, PHRENOLOGY
APPLIED TO EDUCATION AND SELF-IMPROVEMENT, DO. TO MATRI-
MONY, DO. TO MEMORY, TEMPERANCE, ETC.

"NATURAL WAISTS, OR NO WIVES."

LIBRARY.

PROSPECTUS
OF VOLUME IX. FOR 1847,
OF THE
AMERICAN PHRENOLOGICAL JOURNAL.

O. S. FOWLER, EDITOR.

To reform and perfect Man—to develope, by culture, the original beauties and capabilities of his nature—is a work the most arduous and exalted that can possibly engage human intellect or effort. To do this effectually, however, his nature must be known; and since PHRENOLOGY, and PHYSIOLOGY embody his entire constitution, there is no way by which we can so easily become acquainted with ourselves, or for what occupation in life we are best qualified, as by the aid of these sciences.

To these subjects and their various applications, will this Journal be devoted. It will present,

PHRENOLOGY.

Each number will analyze one or more of the Phrenological organs, both singly and in their various combinations, illustrated by engravings, showing their location. Each number will also contain the Phrenological developments and character of some distinguished individual, accompanied by their LIKENESSES. This department will give just that PRACTICAL view of PHRENOLOGY which is required in order to fully understand its proper application.

PHYSIOLOGY.

To know and obey those laws of LIFE and HEALTH, unfolded by these sciences, constitutes the main basis and superstructure of talent, virtue, and happiness. This department will also be illustrated by engravings.

ANIMAL MAGNETISM

Will receive its due attention; and our readers will receive through this medium, all that is new, interesting, and important.

WOMAN.

Her character, influence, sphere, and consequent duties—the government and education of children, &c.—will also be presented in this Journal.

Our field is indeed the WORLD, PHYSICAL, INTELLECTUAL, and MORAL. Human improvement and happiness we shall endeavor to promote. Those, therefore, who are interested in the advancement of our race, and would ameliorate their condition, may do so perhaps more effectually by circulating this Journal, than by any other means; for it will embody the principles of all reform.

This work will be issued monthly, containing thirty-two or more pages, on good type and paper, at the extreme low

PRICE OF \$1.00 PER YEAR, IN ADVANCE.

Subscriptions should, in all cases, be addressed, POST PAID, to

FOWLERS & WELLS,

PHRENOLOGICAL CABINET, 131 NASSAU ST., NEW YORK.

EDITORS and POST MASTERS are authorised AGENTS for this work.

✎ Editors who will give the above three insertions, or who will notice the Journal regularly, shall be entitled to an exchange.

A liberal discount will be made to Agents and Clubs.

Sample Numbers of the work will be sent, GRATIS, when requested.

TIGHT-LACING,

OR THE EVILS OF

COMPRESSING THE ORGANS OF ANIMAL LIFE.

ILLUSTRATED BY CUTS.

BY O. S. FOWLER,

PRACTICAL PHRENOLOGIST.

Editor of the American Phrenological Journal; and Author of Phrenology Proved, Illustrated and Applied, Fowler's Works, &c. &c.

"Natural Waists or no Wives."

O. S. & L. N. FOWLER, 131 NASSAU STREET, NEW YORK.

THE self-induced evils under which mankind groan, are many and distressing. Of these, some are imposed by intemperance, and others by poverty, sickness, and the artificial state of society in which we live; but all are brought upon man *by himself*. But the great proportion of them are inflicted by the tyrant goddess FASHION; of which TIGHT LACING is one of the most painful and injurious. For the last ten years, the author has taken a bold and public stand against these evils, especially the latter. In his work on Matrimony, he censured this wicked practice in terms of unqualified disapprobation, even though fully aware that its sale would be materially injured thereby. He has since had the unspeakable satisfaction of knowing that these brief but pungent remarks, have led to the formation of *Anti-Lacing Societies*, and been a rallying point for the friends of "natural waists or no wives." With the view of extending his usefulness in this department, and doing what he can to render a practice which is as great an evil as intemperance ever was, and greater than that vice now is, as disgraceful as it is fashionable and pernicious, he has determined to devote the following pages *exclusively* to a practical exposition of the evils of this fashion, and thereby do what he can to induce young men not to require this self-immolation at the hands of woman, and induce the latter to abandon a practice so destructive of their own happiness and so detrimental to posterity.

To render the evils of tight-lacing still more plain and forcible, cuts have been introduced, representing both the natural position and full development of the vital organs, and also their cramped state and dislocated position.

In order fully to present this whole subject, it will be necessary to point out somewhat fully the functions and uses of the principal organs of the body, but the *science* therein involved will be dwelt upon no farther than is indispensable to show how this foolish but pernicious practice destroys personal happiness, mars beauty, undermines the constitution, depresses the spirits, shortens life, and injures posterity. Do not, fair reader, discard these pages with a sneer, but *peruse attentively*, and then act as intellect and moral principle may dictate.

The human body, then, is composed of three great classes of organs, all distinct in their nature and ends, but each indispensable to happiness, and even to life. These classes of organs and their functions are sometimes called *Temperaments*, and the predominance or deficiency of either, is called the predominance or deficiency of the corresponding *Temperament*. These classes of organs or temperaments are,

1. The VITAL or NOURISHING Temperament; which embraces the heart, lungs, digestive apparatus, blood, viscera, and all the *internal* organs, analogous to those removed from animals in fitting them for the table, and contained within the thorax and abdomen. Its predominance gives a thick-set, stocky form of body, together with depth, breadth, and often roundness of shoulders, and thus a full, capacious chest; throws the arms far apart and sets them well back; gives a well-developed abdomen, large and strong lungs; great power of voice; a full, strong pulse; sound, and well set teeth; plumpness of person; a large waist; full bust, and good figure. This organization gives great strength of constitution and vigor of body; a strong hold on life; a capacity for enduring fatigue, privation, and exposure; an abundant supply of animal life and vital energy, to be expended either by the muscles in physical exertion, or by the brain and nerves, in thought or feeling; warmth and elasticity of feeling, and a hearty relish for food, sleep, and all the enjoyments of animal life. They furnish vitality. They impart that animal life, that physical vigor, required by every muscle, by every nerve, by the brain, by all portions of the body to sustain them in action. Without this vitality they die instantur. With it but sparingly supplied, the brain, the muscles droop, become inert, and die. Lascitude, general weakness, fatigue, a permanent faintness or sinking of spirit, together with this whole class of feelings, grow out of the feebleness of these organs. Many readers know by experience what a weakening influence indigestion, or extreme fatigue, or bad breath, say the feeling of suffocation produced by being in a crowded room, or a muggy atmosphere, &c., have on both the mind and the body. Being put to it for breath, or afflicted with the asthma, or troubled with palpitation of the heart, or diarrhea, or spitting of blood, or a sinking down into consumption, are all but disorders of this range of organs, and the languid faintness and feebleness occasioned thereby, will serve to illustrate both their function and the effect of their feebleness or disease.

This portion of the body not only originates vitality, but supports and sustains the whole animal economy; and constitutes the fountain-head and main source of animal power and vital energy; manufactures animal heat; resists cold and heat, disease and death; and re-supplies the brain, nerves and muscles with that vital energy which their every action compels them to expend. It is the first portion of the animal economy formed, and the means employed in manufacturing and depositing matter for the formation, growth, and nutrition of all the parts requiring either;

and hence, is most active in childhood and youth, when these *functions* are the most vigorous. Life is also extinguished sooner by a blow on the pit of the stomach than on any other part, the head not excepted, and the blood, instead of coagulating, remains liquid, all showing that these internal organs are the fountain and centre of animal life. All aged, all eminently talented persons will be found to possess amply developed chests; and all consumptive and short-lived families, to have narrow chests. All grand-mothers will be found to have large waists; for, without that ample stock of vitality furnished thereby, they cannot live to become grand-mothers. The chests of long-lived persons, and of hale, hearty families, will always be found to be deep, ample, and expansive; their shoulders broad, waists large, and persons stocky; but those who die young, unless of accident or some acute, inflammatory disease, as well as sickly, delicate, feeble children and invalids, will be found to be slim-built, narrow and shallow chested, small around the waist, and poorly developed in the abdomen; as are most who are afflicted with dyspepsia, liver-complaint, scrofula, weakness, palpitation of the heart, consumption, and this whole class of diseases. The *cause* of these diseases is feeble vital organs, and their *indications* are a narrow chest and small waist. Other things being the same, in proportion to the development of these vital organs, that is, to the fulness of the waist and expansion of the chest, will be the health and strength of constitution. Show me a narrow chest and small waist, and I will show you a delicate, sickly invalid; but let the heart, lungs, digestive apparatus, and circulation be vigorous, and the whole system is vigorous; the feelings buoyant and elastic; the health excellent; diseases resisted; and life prolonged. Were I to take the most effectual method I know of for undermining the health of an enemy, and making him perfectly wretched, I would *cramp his vital organs*—in other words, I would *lace* him.

Another illustration. Deprive the stomach of its required supply of food. You become weaker and fainter in mind, in body, till you die of pure inanition. And this will show both the nature and function of digestion, and the importance of a healthy stomach, as well as of furnishing the right *kind* and *quantity* of food. Another. Go without breath, or breathe impure air, or air saturated with poisonous gases, or breathe only half enough, or compress the chest, and the office of the lungs, as well as the importance of abundance of wholesome air for respiration, will become *sensibly* apparent. Or let the heart become enfeebled—its pulsations labored and inefficient, the blood unequally distributed, the hands and feet cold, but the head burning up with heat, the skin cold and clammy, the body chilly, the blood diseased—any disorder affecting the circulation, and you will have a *practical* illustration of the importance of a vigorous circulation. Let the liver, let the kidneys, let any of the internal organs be disordered, and we then *feel* the value of vitality by its scarcity.

Turn the tables. Let the muscles be powerful, so that you can turn off any quantity of work, and for year after year; or walk a great distance without fatigue; or move, labor, and do every thing with perfect ease and even pleasure. Let the lungs be large and active, so that you can drink in full and constant supplies of fresh air to invigorate the whole system and charge it with that vital electricity derived from breath. Let the heart send the blood, thus thoroughly vitalized, bounding and rushing through all parts of the system, even to the ends of the fingers

and toes, imparting health, energy, power, spontaneous action, to every muscle, nerve, the brain included. Let the digestion be perfect. Let food never trouble you. Let it fill up your person, make perfect chyle, perfect blood. Let, in short, all the vital organs be fully developed, be healthy, be vigorous, so that your supply of vitality is abundant, and a flow of healthy, happy feeling thrills throughout your whole frame. Disease keeps aloof. Distress is a total stranger. You know no pain. All you see, all you feel, all you do, but makes you *happy*,—happy beyond what words can express. Experience alone can disclose the height, the depth, the extent, the sweetness of that happiness which flows from a healthy vital apparatus.

No. 1.

But to show the *rationale* of this whole subject still more specifically. Cut No. 1 shows the *location* of those organs individually, which, taken collectively, constitute this vital apparatus. The upper portion represents the throat, including the passage way of the food. Those lobes marked R L and L L [right lung and left lung] represent the lungs, which almost encircle the heart (H,) which two fill up the upper portion of the chest as far down as the diaphragm, (that rainbow-like curve, marked D.) below which is the stomach, (marked Stm.) at the upper portion of which the food enters it, and, after passing round and round till converted into chyle, it escapes at the upper part of the left hand end, through an opening called the pyloric orifice, into the duodenum, where it receives two secretions, the

one from the gall-bladder (marked G., which is secreted by the liver, marked Liv.) and the other coming from the pancreas or sweet bread—the two converting it into a milky substance which contains all the properties of blood, except the oxygen received from the air. Exposed to air it turns red. As the food passes along the intestines, (those crooked folds marked I I I,) it is assorted, the refuse part continuing along the intestinal canal till it is rejected in the form of fæces, and the nourishing properties being taken up by the lacteals, vessels that have little mouths like, opening into them, which, uniting together, carry the nutrition along up near the back bone till it empties it into the heart, where, mixing with, it is converted into blood; and is sent by the heart, first to the lungs, to be oxygenated or charged with vitality, and then to be received back into the heart and sent round the whole system on its life-imparting mission. If the digestion be bad, this blood is of course imperfect, or perhaps loaded with disease; for

when food lays long in the stomach without being digested, it ferments, that is, decays or rots, and thus engenders vast quantities of corruption, which, entering the blood, carry disease to all portions of the system, escaping by slow degrees through the lungs, and by insensible perspiration. Hence the importance of having good food, and that perfectly digested; and, when digestion is imperfect, of restoring it again to powerful and healthy action.

The heart, by every pulsation, propels the blood along the arteries, which continue to divide and subdivide, till they become too small to be seen by the naked eye. They can be traced into subdivisions still more minute by the aid of the microscope, but the most powerful optical instruments cannot trace them to their termination, so infinitely small and numerous are their ramifications. Indeed, the finest point that can be made cannot be inserted in the flesh without penetrating them. It is in these inconceivably small capillary vessels that the blood expends its life-giving energies. It then passes into the veins. But, by this time, it becomes charged with carbon, of which charcoal is mainly composed, which evolves so poisonous a gas when burned. This carbon it is which gives it its dark blue, leaden aspect. To carry off this carbon by respiration, is one of the offices of the lungs. When, however, respiration is imperfect, the air close, the breathing obstructed by asthma, or whale-bone, or steel bars, this deadly poison, unable to escape, is compelled to return with the blood, to irritate the system, to enfeeble vitality, to destroy life.

Stop the action of the stomach by withholding nutrition, and how soon human beings die. Suspend the functions of the lungs, by withholding air, and how soon they suffocate! and just in that proportion in which *either* of these great functions is retarded, in just that proportion is life extinguished and death hastened. Tight-lacing cramps the action of both the lungs and stomach, and thereby retards both digestion and respiration, and in just that proportion deprives those who lace, of life. This point will be seen in its true light, by contrasting the engravings 1, 3 and 5, which show the natural size and position of these organs, with engravings numbered 2 and 4, which show the effects produced by compressing these points. The latter are copied from life, or rather, from a lady who killed herself by tight-lacing. They are not exaggerated; but, are so far from it, that they only represent the ribs (r. r.) as meeting, whereas they often LAP OVER, as will be seen on examining the chests of many a lady promenading our streets. Probably few females will read this who do not *know* of some female acquaintance whose ribs have been made to lap over by tight-lacing. The distance from the lower end of this lady's breast-bone to her spine, was only *one inch and three-fourths*, not a **THIRD** its usual distance.

The amount of air supposed to be breathed at each ordinary, natural inspiration is found to average about six pints; while the amount usually inspired by a *tight-laced lady*, is only about *three* pints, or a diminution of about *one half*! Of course, tight-lacers have only *half* of their natural powers of life, and are therefore only about half alive, the other half being *dead—dead while they live*, besides the shortening of their lives by hastening death.

Again. Notice the process of breathing in yourself; and when unrestrained, you will see a full, free expansion and contraction of the *ribs*.

No. 2.

Their expansion is seen in Cut No. 2, which represents the ribs full and natural. Lacing prevents that expansion of the chest which is natural in breathing, and by means of which alone air can be admitted into the lungs. This shows *how* it is that tight-lacing prevents breathing, and thus literally *suffocates* its fashionable victim. And I now appeal to every corseted woman, whether she does not experience a sinking faintness, a choking for want of breath, a suffocating sensation, as though she should die; a panting for breath, which, carried much farther, would destroy life on the spot. It is this which occasions so many laced women to faint at church, or on occasions where the house is full, and the air therefore less pure. They obtain but little breath at all events, and that

little being impure, they faint from mere want of it, including also that want of circulation, caused by cramping the heart and arteries. And how quick a woman comes to, when her girt-strings are cut!

Tight lacing violates another important physiological principle. Digestion is greatly facilitated by *motion* in the stomach. Indeed, without this motion, its functions soon become enfeebled, its conditions diseased, its product corrupt, and life itself consequently enfeebled, by the disease thereby engendered in the whole system. To render this motion constant, and thus perpetually to assist digestion, it is so arranged that every breath we draw presses downward upon all the organs below the lungs, and thus imparts this much needed motion to the digestive apparatus. But tight-lacing *girts in* the lower portion of the lungs, and cuts off all that downward movement naturally imparted by breathing to the organs of digestion; and confines all the motion occasioned by breathing to the upper portion of the lungs. By noticing the motion made in breathing, it is easy to see who is laced, for those who *are* laced, will heave the upper part of their chests greatly, but the entire region of the abdomen will be motionless; the consequence of which is a most fatal torpor of the whole digestive apparatus, that gradually but effectually stops the manufactory and flow of vitality at its fountain head, weakening the powers of life while we live, and bringing them the sooner to a fatal cessation.

One appeal more, and, if possible, still more cogent. It is directed to the very organ that makes our women lace—to their *vanity*. *Properly* are you called *fair*. You are called fair, beautiful, lovely, handsome, pretty, graceful, charming, &c. God has made you so. Beauty is indeed a valuable *addition* to the character of woman. Man is constituted to *love* female beauty. And whatever *adds* to your beauty, should be sedulously cultivated. Whatever *detracts* therefrom, should be entirely eschewed.

Now what effect has tight-lacing on beauty? MOST PERNICIOUS—*always, necessarily*. You think it makes you handsome! But, think

you that the wasp-like waist is in itself more beautiful than the waist given by nature? Think you that girding the waist can improve the beauty of the works of *God*? How would Venus de Medicis look with

No. 3.

No. 4.

a little pent up waist? As well pinch up or destroy any other portion of the system, and then call it *handsome*! Nature is always beautiful; nature *distorted*, always homely. Look at the same woman, or upon two women, alike except that the waist of the one shall be distorted and her motions cramped by corsets, and

the other free, her motions natural, easy and graceful, and then tell me if a naturally full waist rendered small artificially, is not a *deformity*? /

But, this is but a small part of the reason why lacing renders a woman homely. Can a *poor, scrawny, pale-faced, spare-featured, ghastly-looking* woman, possibly be handsome? Beauty is *always* accompanied by a plump person, and a ruddy cheek. But sickness always impairs the beauty; and death, by rendering the cheeks sunken and the looks haggard, destroys true beauty. And for this reason. A full cheek and a plump person indicate *health*; and this, a full supply of that animal vigor on which life and happiness depend. Now, lacing impairs the health and diminishes the action of the lungs and stomach. This enfeeble vitality and invites death, and *thus* effaces beauty. Beauty cannot exist without health and a fresh countenance, and they cannot exist with tight lacing. Lacing diminishes both the size and the vigor of the whole vital apparatus, and this causes the cheeks to fall in. (See the principle on which this depends explained in the Phrenological Almanac for 1845 Art. 1.) But, vigor of lungs and stomach both fill out and also *redde* the cheeks, and hence promote beauty. But tight-lacing has been shown to destroy both. One reason why marriage impairs the beauty, is because it impairs the health. But not to dwell. I take the broad ground—a ground supported by both observation and science—that *no woman having an artificial waist can be handsome*. Tight-lacing would make Venus herself homely—will make *any* woman homely, tame and uninteresting, by making her thin, spare, scrawny, and haggard in appearance. I wish this point were fully understood. It alone would break up lacing.

But this is not all, nor even the worst. [Tight-lacing *diseases* the lungs, as well as retards their action.] By a glance at their position, as seen in Cut No. 1, the corsets so compress their entire lower section, as almost completely to prevent action. Now who does not know that this inaction is a most powerful promoter of disease. Action is known to

work off most kinds of disease. Let a healthy man *keep still* for a few weeks, and disease gathers and deepens on him, till he is compelled either to go to work again, or else to die. The virtue of Rammagi's tube consists in its giving *exercise* to the lungs. Let those who are predisposed to consumption but *inflate* their lungs daily and hourly, by full and frequent inspirations, dilating them to their largest capacity, and besides remaining healthy, they will continually *increase* in size and strength. But, let the opposite course be pursued, and opposite results will follow. Let the lungs be cramped, and they will become diseased. The mere pressure of the corset can hardly fail to induce inflammation; and this, carried far, must end in ulceration. But, however detrimental pressure is to any part of the body, and to the lungs in particular, it is their *want of action* which is most fatal to their healthy condition. The law that governs them is, *constant* action, or else disease. Nothing is more fatal to the lungs, than that *inaction* which tight-lacing always and necessarily induces. This, and the pressing together of their pores, which free inspirations would keep apart, causes adhesions, and these, inflammation, and this, ulcerations. Scarcely any one cause of consumption is more prolific. And yet, its victims are said to die of *consumption*, when in fact they die of *lacing*. It is just as bad as though they committed suicide by *strangling* themselves. They *do* commit suicide by *strangulation*, and thus break the hearts of friends and family, and yet the real cause of their death is overlooked, or else kept studiously out of view.

The alarming prevalence of consumption within the last few years, should cause every true lover of his country to weep. It has broken the hearts of thousands of disconsolate parents, removing one by one, their fond hopes and blooming daughters, till *all* were carried to their long home, and they hastened into their graves mourning. And all because their vain but ignorant daughters *laced*. *Tight-lacing* answers the question, "Why do so many more *females* die of consumption than males?"

But its effects on the *stomach* (marked Stm.) are *still more cramped* in proportion, and the nourishing of the system is reduced in even a greater ratio. So that tight-lacers are not even a quarter alive, and are more than three quarters dead while alive. (How can the liver, (marked l. see engravings 3 and 4,) act when drawn down and bandaged with a strong girth around it? Not only is its action proportionably enfeebled, but the product of that action becomes corrupt, because the organ itself becomes diseased, and the stomach thereby corrupted, and the blood rendered impure.) This carries disease to every portion of the system; especially to the *brain*, because that organ receives so large a supply of blood from tight-lacing. This unfolds another cause of the diseased feelings of lacers. Lacing corrupts the blood, and this diseases the *brain*, which makes the feelings produced by the action of that brain diseased. This diseased action of the brain is usually called craziness, or insanity. How beautiful, how philosophical an exposition of the almost universal fact that those who have laced so tight as to disease the blood, are crazy. That they *are* crazy, is rendered evident by the state of mind described on p. 9, and will be rendered still more evident hereafter.

The state of mind there described is only the effect of partial insanity. That tight-lacing produces this state, first, by sending too much blood to the head; and secondly, by corrupting the blood, and

thereby diseasing the brain, is self-evident; and this principle fully *establishes* and clearly *explains* the FACT that tight-lacing produces *mental derangement*.

Tight-lacing not only diseases the blood, but also retards its circulation. How *can* a bandaged, laboring heart give full, strong, healthy pulsations when thus cramped up and bandaged? how send the blood to the extremities, and force it through all the almost infinitely minute and ramified veins of the body? It *cannot*: and even if it could, the blood would be stopped in its course, especially to and from the lower limbs, so that the feet must necessarily be cold, (universally regarded as one of the most *prolific* causes of disease,) and the muscles used in walking, be enfeebled. Who ever knew tight-laced women capable of walking much? How soon do they get out of breath, (because the lungs will not admit air enough to vitalize the blood,) and become fatigued? (because these muscles used in walking, become exhausted from the absence of well arterialized blood.) No! *laced* ladies are good enough to *ride*, and that on the softest cushioned and most easy-riding carriages. Take care, driver! be careful, or you'll jolt them in two: for, such *frail* ware breaks in two *very* easily, *in the middle*.

To be productive of health, or physical or mental happiness, the circulation *must* be *uniform*; and every thing which tends either to retard the circulation as a whole, or to increase the circulation of some portions and diminish that of other portions, will be proportionally *ruinous*. Medical men have not appreciated the importance of equality, or *proportion* of circulation in the different parts. The absence of this uniformity in the circulation, is one of the main causes of disease; and restoring it, will cure most diseases. A moment's reflection and a little observation, will convince every one of the importance of this principle, and also show how *wofully* it is violated by tight-lacing.

(A Philadelphia physician, in a letter to a lady on the effect of wearing corsets, has the following remarks: "I anticipated the happy period when the fairest portion of the fair creation will step forth unencumbered with slabs of walnut and tiers of whalebone. The constitution of our females must be excellent, to withstand in any tolerable degree, the inflictions of the corset, eight hours every day. No other animal could survive it. Take the honest ox, and enclose his sides with hoop-poles, put an oaken plank beneath him, and gird the whole with a bed cord, and demand of him labor. He would labor indeed, but it would be for breath.")

The second great function of life affected by tight-lacing, is the NERVOUS SYSTEM AND BRAIN—that portion of the body called into action in the manufacture and exercise of feeling, thought, sensation—that portion of us for which all others were made, and which *lives* and *is*, and which constitutes the most exalted function of our nature, as well as *the* end and object of our existence. All our pleasures are experienced by its instrumentality, and are connected with its normal, healthy action; while every pain we experience or are capable of experiencing in this world, is the legitimate product of its abnormal, unhealthy action. Nor is it *possible* for these organs to be unhealthy, or morbidly active, or inflamed, or in any way to depart from their healthy action, without causing pain, and in just that proportion in which they depart therefrom. Those in whom this department of their organization either greatly predominates, or becomes diseased or inflamed, will generally have cold

hands and feet, but much heat and pain in the *head*, if not a severe and continual head-ache, because too much blood flows to the head, and too little to the extremities. This causes them to feel nervous and irritable, and to become excited inordinately, even by trifles. Their heated imagination magnifies a mole-hill till it becomes a mountain. They are kept in a continual fever of excitement; tossed back and forward by currents and counter-currents of feelings which they find it impossible to control. Sometimes they are elated beyond measure, and filled with ecstasy; and anon they are plunged into the very depths of despair by some trifle, too insignificant to affect a healthy brain; for their sensibilities are *morbidly* alive to *every* thing. They retire to their couch, but not to sleep. The boiling blood courses through their brain, and their laboring pulsations shake their very frame. They think and feel intensely upon every thing, only to increase the disease, and aggravate their mental sufferings. If Cautiousness be large, they are afraid of their own shadow, and see all their paths filled with lions and tigers. If Approbativeness be large, they thirst for praise, but see the desired cup dashed from their lips by merely imaginary neglects, which are so construed that they cause the deepest chagrin and mortification. They seek sleep but find it not. Hour after hour, they turn from side to side upon their couches, exhausted even to prostration by mental action, yet unable to compose their excited, erratic feelings. Bright thoughts flit like meteors across their mental horizon only to vanish in midnight darkness. And if tardy sleep at last folds them in his unwilling arms, frightful dreams disturb their shallow slumbers, till they awake enshrouded in deep melancholy and impenetrable gloom. They feel most keenly only to feel most wretchedly. At short intervals, a sigh, or groan, or "Oh dear me!" escapes them, and they internally feel, "Oh wretched man that I am!" not because they feel guilty, but because they are *nervous*. They feel burdened with, they know not what, but this only aggravates their oppression. Things, otherwise their joy, become their tormentors, and every sweet is rendered bitter. Their nervous energies are wrought up to the highest pitch of inflamed action, and yet they have no strength to stand this preternatural excitement. Days and weeks roll on only to augment their miseries. The excited mind seeks relief in books, especially novels, which only increase their sufferings. The *cause* of these sufferings is a disordered MENTAL *temperament*, and TIGHT-LACING has a *direct* and necessary tendency to cause this predominance, first by retarding the action of the vital organs and hindering digestion, nutrition and circulation; and secondly, by inflaming the nervous system, and giving the blood a tendency to flow to the head, by preventing its flowing to the extremities of the skin. On inquiry into the private feelings of tight-lacers, into the secret recesses of their hearts, they will be found to feel as above described. If they have no *real* cause of trouble, they have some *imaginary* one, yet never once dreamed that this girding of their waists sends the blood up to their heads, and thus *morbidly* excites the brain, and at the same time cuts off those vital energies which alone can sustain it; thereby producing that disorder of the *mental* temperament which *causes* and *perpetuates* this awful state of feeling. And it is *right*; for tight-lacing is a *great* sin, and should be followed by *severe* punishment.

My conscience constrains me reluctantly to allude here to one other evil connected with tight-lacing. If I could omit it in justice to myself,

in justice to my work, in justice to tight-lacers, and in justice to those who may marry small waists, I would gladly do it. One thing is certain, I do not do it to gain popularity, for I know it will injure (at least for a few years) the popularity and sale of this work. I introduce it *because it ought to go in—it ought to be known* that it may be guarded against. Who does not know that the compression of any part produces *inflammation*? Who does not know that, *therefore*, tight-lacing around the waist keeps the blood *from* returning freely to the heart, and *retains* it in the bowels and neighboring organs, and thereby *inflames all the organs of the abdomen*, which thereby *excites amative desires*? Away goes this book into the fire! “Shame! shame on the man who writes this!” exclaims Miss Fastidious Small-Waist. “The man who wrote that, ought to be tarred and feathered.” Granted; and then what shall be done to the *woman who laces tight*? If it be improper for a man to *allude* to this *effect* of lacing, what is it for a *woman* to *cause* and *experience* it? Let me tell you, Miss Fastidious, that the less you say about this, the better; because I have *TRUTH* on my side, and because it is high time that *men who wish virtuous wives knew it*, so that they may *avoid* those who have *inflamed* and exhausted this element of their nature. It is also high time that virtuous woman should *blush for very shame* to be seen laced tight, just as she *should* blush to be caught indulging impure desires.

(I know, indeed, that I have now appealed to the most powerful motive possible—to that of woman’s *modesty*; and therefore I make this appeal *because* it is thus powerful. I wish to make woman *ashamed* to lace tight, and *this will do it*. No woman who reads this will dare be seen laced tight, because she *knows* it to be true, both from experience and from physiology. My *object* in this allusion is, to break up this most pernicious fashion, and I think this one suggestion alone, if generally known, would do it. Many physiologists know this fact, but dare not *mention* it. The Lord forgive those *extra* modest authors who dare not speak the *TRUTH* for fear of offending fastidious ears, and losing reputation. Let it be remembered that a marked change is now coming over American ladies. They are known throughout Christendom for their false modesty; but the better classes are beginning to lay down their squeamishness. A few lessons in Physiology will break it down in all whose opinions are valuable—the rest will do well to remember that “*Evil is to him who evil THINKS*,”—but that “*To the PURE, ALL things are pure*.” A few years will see whatever odium may be attached to this allusion, converted into commendation. At all events, I *dare* tell the truth, and am independent of consequences.

I will add, that this explains the fact that tight-lacers so easily *get in love*. The *fact* is indisputable, and the reason obvious. Tight-lacing disorders the nervous system, and this inflames the *base* of the brain, which necessarily excites the organ of Amativeness, situated at the lowest point in the base of the brain, and therefore the more readily affected by whatever disorders the body. In his work on Education, p. 94, and also in that on Temperance, p. 13, the author has *demonstrated* the principle, that *whatever* stimulates the body or irritates the nervous system, thereby *necessarily* excites the *base* of the brain in a pre-eminent degree. It is a settled principle of physiology, that *nothing* can stimulate or morbidly excite the body without setting on fire the animal propensities. Tight-lacing does certainly do this. And as Amativeness is

located at the lowest part of the base of the brain, tight-lacing, in rendering the brain and nervous system morbidly active, thereby necessarily kindles impure feelings. (This principle cannot be evaded. It is true in theory, it is true in fact, that tight-lacing kindles impure feelings, at the same time that it renders their possessor weak minded, so as to be the more easily led away by temptation. And *this*, aye, *this* is the reason why the bucks keep up this immodest fashion.)

I heartily pity a tight-laced woman; for, I know what she feels, and what she endures. But she inflicts it *voluntarily*, just as the Hindoo widow burns herself to death on the funeral pile of her husband.

But another still greater evil inflicted by tight-lacing, is that which strikes a deadly blow at the very *life* of mankind. I refer to its influence on *posterity*. One end of woman's existence is offspring; and who does not know that the constitution and health of the *child* depend upon those of the *mother*; and especially, upon an *ample development of these vital organs*. The *NOURISHMENT* of the child, before and after birth, is a *leading* condition of a good mother in her capacity as mother. If she have too little vitality to sustain her own brain and muscles—a point already shown—how *can* she have a *surplus* for her infant? To have as large a portion of her own feeble and vitiated vitality as is necessary to carry her child, withdrawn, makes her feel most awfully—*increasing* that class of feelings and cast of mind described on p. 10. Besides, tight-lacing allows so scanty a supply to the child, as often to prevent its entering the world alive, or else to hasten its time. But even if it do live to be born, and its mother live to bear it, it is so sickly, so feeble, that a trifling exposure nips the tender bud in its germ, or causes it to drag out the miserable existence of an invalid.

To every man who prefers burying his children to the trouble or expense of raising them, I say *marry a small waist*, and you will be sure to have few mature offspring, and those few thinned out by death. But I *warn* those who wish to see a healthy, happy family growing up around them, to render their life pleasing and nurse their declining years, as well as to perpetuate their name and race, and also those who do not wish to have their hearts rent asunder by the premature death of wife or children, to marry a woman having a large waist, full breast, and deep, broad chest. Such will live long; but slim, small-waisted women must, in the very nature of things, bury their children and die young themselves. If this pernicious practice continue to rage through another generation with as much violence as it has for the last and present, it will kill all fashionable women and their children, and leave our square-formed, broad-shouldered, and full-breasted Irish and German women alone for wives and mothers. It has already alarmingly deteriorated our race in both physical and intellectual stature, and unless checked, *will soon DESTROY* it. Let this practice be continued, and *nothing* can save us as a nation: let it be abolished, and our nation will soon stand at the *head of the world* in every desirable quality.

No tongue can tell the number of mothers and children killed outright, or else made to drag out a short and miserable existence, by that accursed practice of tight-lacing. (Most effectually does it cramp, and girt in, and deaden the vital apparatus, and thus stop the flow of vitality at its fountain-head, killing its thousands before they marry, and so effectually weakening others, as indirectly, though effectually, to cause the death of tens of thousands, aye, of millions more.) Yes, and that

even by *Christian* mothers—by the daughters of Zion, the followers of the Lamb! Yea, more. These infanticides, *with their corsets actually on*, are admitted into the sanctuary of the Most High God, and even to the communion-table of the saints! And poor, muffle-drummed ministers, either do not know that corseting does any damage, or, knowing it, do not open their mealy mouths, but administer the sacrament to infanticides, and to those who, while partaking of the emblems of their dying Savior, are “*in the very act*” of committing *infanticide*, and slow, but effectual *suicide*! Nor is there any sin in American Christian mothers committing these things, whereas *missionaries* must be sent to China and Bombay, to prevent *their* committing these very same crimes, though by a process as much less horrible, as to be killed outright by one fell blow, is less painful than to be *gradually* starved and strangled, till a lingering, and therefore a most horrid death, gives relief.

I appeal to every patriot, to every Christian, to every physiologist, to raise his voice with mine in the extirpation of this great sin of tight-lacing. Let the finger of scorn be pointed at every tight-laced woman, and let small waists be shunned, instead of courted, as wives and mothers. The practice is disgraceful, is immoral, is *murderous*; for, it is gradual *suicide*, and almost certain *infanticide*. It is *worse* than infanticide; for, to entail a diseased body and mind upon offspring, *in addition* to causing their premature death, is a crime of the *deepest dye man CAN commit*.

Wherein consists the difference between sowing the seeds of disease that necessarily hasten death, and killing the child outright? The *END* attained is the same—the *means* of the former is as much more horrible than those of the latter, as a *lingering* death is more horrid than a sudden one. Whence that mortality of children which consigns more than one half of all that are born in our cities to an early grave? Is it *natural*?—a part of the *necessary* operations of nature? No! it is *violated* nature; and I fearlessly avow, and appeal to the decision of any man of science acquainted with the subject, whether this is not the most effectual cause of infantile death, or, what amounts to the same thing, the means of that most revolting of all crimes—infanticide? Remember, ye young ladies who, in dressing yourselves off for the ball, or fashionable party, or promenade, I beseech you remember, that you are not only sowing the seeds of disease and premature death, which will nip all your pleasures in the bud, but which must also yield you a harvest of sorrows too many to number and too aggravated to endure—that you are bringing down not only your *own* soul with sorrow to an untimely grave, but, in case you become mothers, your *children* also with you or before you into their graves. If you wish to exclaim under a burden of nervousness and mental distress which you cannot support, “O wretched life that I live!”—if you wish to break the heart of your husbands and friends by your premature death, and have your own souls pierced through with indescribable anguish by the death of your children; if you wish to die while you live, and to die finally before your time; if you wish every sensible man that sees you to think, “how foolish, how wicked, that woman;” if you would exchange the rosy cheek of health for the portion of laced and sickly beauty; and the plump, round, full chest and form of unlaced health, for the poor, scrawny, haggard, sunken, and almost ghastly look of all who lace—then buy corset after corset, and lace tighter and tighter, and still tighter, and keep laced night and day till

them, or by even encouraging it. If you catch them fastening their clothes tight, tear them open, and explain to them the evils of compressing the organs of animal life.

5. To you, FATHERS, I make an appeal. If your wives are so destitute of physiological knowledge, and so full of fashionable foolery, and, withal, so anxious to *marry off* your daughters, as to make them follow this pernicious fashion in order to make a match, do *you* interpose a father's counsel; (and, if your daughters have been duly trained, your *advice alone* will be sufficient;) and, caution them not to marry any one who likes them a whit the better for tight-lacing; for, such a husband will never support them or make them happy.

Lastly, but most *emphatically*, I call upon you, YE DAUGHTERS OF ZION, ye lovers of the Lord! ye professed followers of the meek and lowly Jesus, I call upon you, totally to abstain from this practice and frown upon all who follow it. (If there be one self-contradiction or anomaly greater than another, it is a Miss RELIGIOUS SMALL-WAIST.) I do not certainly know but there *might* possibly be such a thing as a Christian drunkard, or a religious rascal, or a praying cheat and liar; but I really do not see how it is *possible* for tight-lacers ever to enter the kingdom of heaven. If so, it *must* be "*so as by fire*." (To lace tight is to commit suicide and infanticide, as already shown; and can *suicides* and *infanticides* be *Christians*?) If so, let me *not* be one. (Such love the young bucks and foppish beaux far better than their "Lord and Master.") Quite too many of our female *professors* of religion, evidently go to church more to show their *small waists* than to worship. How *can* ye profane the sanctuary with your corsets, your cotton paddings, and your bustles? How *can* ye sing the praises of your God, or bow "before Jehovah's awful throne," in devout adoration or praise, with the circulation retarded, and your minds enfeebled and distracted by the uncomfortable or painful *stays*? It always shocks me—it reverses my veneration—it strikes me as a great profanation of God and things sacred, to see a tight-laced lady enter or leave the sanctuary with her gilt-edged prayer book or Bible. I should as soon think of joining a company of tavern-loungers as a church that allowed tight-lacing; for, the latter is as bad and its evils are as great, in my estimation, as those of drunkenness.

Once more, ye daughters of Zion—once again I call upon you to remember your standing and influence. Occupying as you do the very *pinnacle* of influence, your example does more to break or to perpetuate this practice, than almost any other influence that can be brought to bear upon it. Yet, *which way* does that all-powerful influence bear? It bears as strongly in favor of tight-lacing as your corset-strings do upon your waists! Do you really suppose your Savior thinks any the more of you for being *corseted*? Then why do it, especially when you go to sing his praises and to engage in his worship? What *possible* motive, drawn from religion, can a *pious* woman have for tight-lacing? No more than she can have for taking arsenic! Tight-lacing is incompatible with Christianity, or else I do not understand either its precepts or its principles. Will you, pious lacers, have the goodness to explain this passage? "*Unless ye forsake ALL, and follow me, ye CANNOT be my disciples,*" or else lace no more forever!

AMERICAN PHRENOLOGICAL JOURNAL.

OPINIONS OF THE PRESS.

Editors who think our humble efforts to enlighten and inform man, worthy of their commendation, have our cordial thanks, and doubtless those of their readers whom they thus benefit. It is in their power to do incalculable good by recommending this study of human nature to those whose opinions they do so much to form, and by doing this, they will enjoy the perpetual gratitude of all whom they induce to either study Phrenology, or read our man-expounding pages. The following opinions of the press, may be taken as a fair average of the tenor of their remarks concerning us:—

AMERICAN PHRENOLOGICAL JOURNAL.—This publication, issued monthly by Fowlers & Wells, richly merits the patronage of every lover of the study of man. It is filled with the most interesting matter, brought forth by long experience and deep researches in Phrenology, Physiology, Physiognomy, and Magnetism. The reasoning of its editor is irresistible, being plain and conclusive. No mother who is rearing a family should be without this valuable work.—*N. E. Cataract.*

AMERICAN PHRENOLOGICAL JOURNAL.—I receive this valuable work regularly. It is still edited by O. S. Fowler. Among the periodicals of the day, this is the best and cheapest. No person who has a taste for highly useful reading should neglect to subscribe for it. Send on your orders for the work. Messrs. Fowlers & Wells always fulfil their contracts.—*Self Examiner.*

The editor has gained an extensive reputation as a Phrenologist; and by means of his Journal, he is endeavoring to enlighten the people of the land upon the subjects of Phrenology and Physiology.—*Bangor Gazette.*

This valuable Magazine occupies a place which is filled by no other work. Its object is to enlighten the mind on subjects of which the great body of mankind are the most ignorant, and yet in which they are the most vitally interested. "The highest study of mankind is MAN." That wonderful thing that THINKS and REFLECTS, the human MIND, its powers and faculties, affections and passions, and how it operates and is operated on by surrounding circumstances; its powers of progression and improvement; physically, intellectually and morally, and may be studied to advantage by all. And they should be. It has acquired a reputation and popularity which nothing but real work can secure, and what is more important, its articles are perfectly ADAPTED TO THE WANTS OF SOCIETY. The editor punctually fulfils what he promises, and we hope he will realize all he anticipates.—*Primitive Expounder.*

The Phrenological Journal is one of the ablest and most interesting works on that subject ever published.

St. Mary's Sentinel.

It increases in merit and interest every issue. It contains a choice variety of scientific and miscellaneous matter.

Givard Free Press.

This valuable work is received. It commends itself to all who desire to understand more fully their own physical and mental formation.—*Voice of Freedom.*

This journal presents a very attractive appearance, embellished by a large and handsome engraving of the human head, on which is given a symbolical representation of the different organs and faculties; the body of the work is likewise illustrated by appropriate and well-executed engravings. Of its contents, we need only observe that the high reputation of the Editor, as a practical Phrenologist, offers a sufficient guaranty that the subjects treated are handled in a skillful manner.

Allan Telegraph.

The Phrenological Journal is filled with interesting and valuable matter, and is a sterling work. We advise all of our friends to subscribe for this work.—*Western Literary Messenger.*

The contents of this work are so admirably written, with a view to interest as well as instruct, that the most careless reader could hardly fail to give them a perusal. The articles on "self improvement" are replete with truth, and should commend themselves to very general attention. Indeed, the contents generally are a series of essays, from the perusal of which the reader must derive pleasure and profit.

Evening Mirror.

This journal has reached its eighth volume, and is now on the ninth, a just proof of its merits. One thing is certain, no harm can arise from examining the doctrines of Phrenology so well laid down in this monthly work, and in ninety-nine cases out of one hundred, good will result therefrom; and we say frankly to our readers, one dollar cannot be better laid out than in subscribing for this journal.—*Island City, N. Y.*

THE PHRENOLOGICAL JOURNAL.—Each number of this monthly contains a portrait and biographical notice of one or more distinguished persons, with notes and comments by the Editor, illustrative of their phrenological developments, and is well calculated to enlighten public opinion on these subjects.
Kingston Democratic Journal.

THE PHRENOLOGICAL JOURNAL.—Of this we can say with truth that it is indeed a valuable work, and needs little or no improvement. It is devoted to the noblest of all studies—MAN, and is edited by O. S. Fowler, well known at home and abroad, as one of the best practical Phrenologists living. Although Phrenology occupies a prominent place in the Journal, it is

not exclusively devoted to that subject; but Physiology, Physiognomy, Magnetism, Dietetics, Education, and all other subjects touching the moral and physical elevation of the human race, claim the attention of the Editor, who monthly furnishes his readers with something valuable on most of these topics; and those who do not believe in any of the above "SCIENCES," will find themselves much improved by the constant perusal of this work.—*Mercantile Advertiser.*

We are indebted to FOWLERS & WELLS, the celebrated Phrenologists, of New York, for the Phrenological Journal. These gentlemen understand the science probably better than any other men now living, and are not at all backward in expressing their thoughts on all subjects pertaining thereto. The promptness with which they fill all contracts, leads us to believe that bump No. 15 is well developed on their craniums.
The Ohio Tocsin.

THE AMERICAN PHRENOLOGICAL JOURNAL is before us. This work cannot be prized too highly. It teaches that most interesting of all Natural Sciences, the study of Man.

Spirit of Temperance Reform.

AMERICAN PHRENOLOGICAL JOURNAL.—This truly scientific periodical has come to hand. This work we particularly admire. It contains such a vast variety of original ideas, and is edited with such distinguished ability, that it seems to continue to improve the farther it progresses.—*North Western.*

This work is well worthy the support of all, and a reading may open the eyes of those who ignorantly ridicule it.

Democratic Pharos.

We receive regularly this valuable work. Mr. Fowler, the Editor, is one of the most celebrated Phrenologists in the world, and it is just the thing that might be expected from him in his endeavors to enlighten the people in regard to "the highest study of mankind." The workmanship expended on this Journal is of the first order.—*Democratic Republican.*

One of the embellishments is an engraving of the human head laid open, and exposing to view the location of the different organs of the brain, each organ illustrated. It is a highly interesting and attractive work.—*Fox River Advocate.*

Its contents, though devoted to the one subject of Phrenology, are yet very various, since Phrenology is the subject, which, beyond all others, includes necessarily the greatest number of topics. The editor has long been known as a leading practical Phrenologist. He is a man of intelligence, and his Journal is full of interest. The work is a monthly of 32 pages, at one dollar per annum.—*Southern Patriot.*

This publication contains much valuable matter. The editor handles his subject with great ability, and succeeds in making his favorite science interesting to the reader, however sceptical he may be as to the truth of the science of Phrenology.

Ulster Republican.

This journal contains much interesting original and selected matter upon the subject, and is eminently worthy the patronage of all.—*Chillicothe Advertiser.*

This work has for its motto, "Know Thyself," and is devoted to Phrenology, Physiology, Physiognomy and Magnetism. No person who has a taste for scientific and entertaining reading, should be without it.—*Henepin Herald.*

Among the many useful and entertaining periodicals of the day, this is certainly deserving of popular favor. The long experience of the editor as an intelligent expounder of the principles and laws of mental and physical organization, entitle his opinions to respect; and no one should neglect to procure the Journal. In it he will find able expositions, not only of Phrenology, but of Physiology, Physiognomy, and Magnetism. No parent should be without it.—*Montgomery Herald.*

The Phrenological Journal, from its commencement, has been one of our most useful periodicals. It truly, as it professes, contains many home truths for home consumption, and none can read it without interest and profit. It is devoted to self-improvement, health, happiness, and human progression.

The Union.

This Journal contains many valuable and important suggestions, well adapted to all classes and conditions of society, and is eminently worthy of public patronage.—*Alphadelphia Tocsin.*

The above are but a few of the numerous favorable notices which we are daily receiving from the press in all parts of the country, and we are happy to feel that our labors are duly appreciated and patronized.

 TERMS only ONE DOLLAR per year in advance.

A LIST OF BOOKS

FOR SALE BY FOWLERS AND WELLS, AT THE PHRENOLOGICAL CABINET,

131 NASSAU STREET, NEW YORK.

All of which are neatly bound in cheap form, EXPRESSLY to send BY MAIL, at the present LOW RATES OF POSTAGE, at the prices affixed to each work. Our friends at a distance may now enclose the money for either of the following works, and receive them by the return of the first mail.

Phrenology Proved, Illustrated and Applied.

34th edition, enlarged. By O. S. FOWLER: containing over 500 pages 12mo. Illustrated by upwards of 40 engravings. A PRACTICAL, Standard work on the Science. Price \$1.

Memory and Intellectual Improvement:

New edition, greatly enlarged and improved. By O. S. FOWLER. Applied to self education and juvenile instruction. Illustrated by engravings. An invaluable work for the young. pp. 230, 12mo. Price 50 cts.

Religion, Natural and Revealed:

Or the Moral Bearings of PHRENOLOGY, compared with those enjoined in the Scriptures. By O. S. FOWLER. Price 50 cts.

Love and Parentage:

Applied to the improvement of Offspring. By O. S. FOWLER. Of which more than ten thousand copies have been sold within six months. Price 25 cts.

Amativeness:

Or the evils and remedies of excessive and perverted sexuality, including warning and advice to the Married and Single; being a Supplement to Love and Parentage. Price 12 1-2 cts.

Matrimony:

By O. S. FOWLER: Or Phrenology and Physiology applied to the selection of congenial companions for life—of which more than thirty thousand copies have been sold in the United States, besides having been re-published in England. Price 25 cts.

Synopsis of Phrenology and Physiology:

By L. N. FOWLER: comprising a condensed description of the functions of the body and mind; also the additional discoveries made by the aid of Magnetism and Neurology. Illustrated. Price 12 1-2 cts.

Marriage:

Or the principles of Phrenology and Physiology applied to Man's social relations, together with an analysis of the domestic feelings. By L. N. FOWLER. Price 25 cts.

Phrenological Guide:

Designed for *Students of their own Characters*. Most of the organs are illustrated with two engravings, showing each organ, large and small. A good thing for beginners. Price 12 1-2 cts.

Phrenology and Physiology:

Applied to *Temperance*, or the laws of life and health; of which upwards of twenty thousand have been sold. No one should be without it. Price 6 1-4 cts.

Tight Lacing:

Or the evils of compressing the organs of animal life, and thereby enfeebling the vital functions. This work has also had an extensive sale. Price 6 1-4 cts.

Synopsis of Phrenology:

Designed for the use of *practical Phrenologists*. Price 6 1-4 cts., or \$4 per hundred.

Hand Book of Hydropathy:

Or an account of the treatment and prevention of disease by means of *Water*. Compiled from the most eminent and recent European authors. By JOEL SHEW, M. D. Price 37 1-2 cts.

The Philosophy of the Water Cure:

A development of the true principles of Health and Longevity. The bathing is illustrated by engravings. Price 25 cts.

The Use of Tobacco:

Its physical, intellectual, and moral effects on the human system. By Dr. ALCOTT. Price 12 1-2 cts.

Tea and Coffee:

Their physical, intellectual, and moral influence on the human system. By Dr. ALCOTT. Price 12 1-2 cts.

Lectures on Clairmativeness:

Or Human Magnetism, as given by JACKSON DAVIS, the Poughkeepsie Clairvoyant. Price 25 cts.

The Philosophy of Mesmerism:

By Dr. J. B. DODDS, as delivered by him in a course of lectures in the Marlboro' Chapel of Boston. Perhaps this is as interesting a work as any which has yet been written on this subject. Price 25 cts.

The Water-Cure Journal:

JOEL SHEW, M. D., Editor. Published semi-monthly at \$1 per year. Address, post paid, S. R. Wells, New York.

A Sober and Temperate Life:

By LOUIS CORNARO. Written by himself at the age of 83 years; with a likeness of the author; who, by his temperate habits, attained the remarkable age of 104 years. This work has been translated into nearly every language, and is really a superior thing; giving directions how to prolong and enjoy life. pp. 228, 18mo. Price reduced from 50 to 25 cts.

Childbirth Without Pain:

By the author of Moral and Intellectual Qualities Transmissible. Containing important directions, &c., &c. Designed especially for women. Price 50 cts.

Human Rights,

With their political guaranties. By E. P. HURLBUT, Counsellor at Law, in the city of New York—who is also a distinguished PHRENOLOGIST—in which is shown Woman's constitutional rights, &c., &c. A work in which all will be interested. pp. 220, 12mo. Price 50 cts.

Comb's Physiology:

From the last Edinburgh edition, with notes and observations. By O. S. FOWLER. This is the best work extant on HEALTH and LONGEVITY. pp. 320, octavo. Price 75 cts.

The Mysteries of Tobacco:

By the Rev. B. I. LANE. With an introductory letter addressed to the Hon. John Q. Adams. By the Rev. S. H. Cox, D. D. This is a good work. pp. 185, 12mo. Price 37 1-2 cts.

Biographies of Good Wives:

By L. MARIA CHILD, author of the "Mother's Book," &c., &c. This work reflects much credit on the author; and no one can read it without being improved thereby. pp. 288, 12mo. Price 50 cts.

History of Women.

A brief history of the condition of women in various ages and nations. By the author of "Good Wives," in two vols. pp. 592, 12 mo. Price for the two vols. 75 cts.

The Complete Phonographic Class Book.

Containing a strictly inductive exposition of Pitman's Phonography. pp. 131, 12mo. Price 37 1-2 cts.

The Phonographic Reader.

A complete course of inductive lessons in Phonography. Price 25 cts.

The Reporter's Guide.

Containing a system of short-hand writing, in ten easy lessons, with numerous illustrations, governed by the analogy of sounds, and applicable to every language. By BAILY. Price 25 cts.

The Phrenological Almanac for 1847.

Containing the likenesses of many distinguished individuals, including that of J. K. Polk, with his character, and much other useful and interesting matter. Besides a beautiful emblematical head, which shows the location of all the organs. The best thing which can be obtained for learners. Price 6 1-4 cts., or 12 copies for 50 cts.

Self Pollution.

The causes of youthful decay. Showing the dangers and remedies of venereal excess. By Dr. L. D. FLEMING. Price 12 1-2 cts.

The Phrenological Journal.

Of 32 large pages, on good paper and type, amply illustrated with engravings, adapted to all classes. It will be found very instructive and useful. Terms \$1 per year, in advance, or six copies for \$4, fifty copies for \$25.

You have here a VALUABLE list of books; all or either of which you may obtain by MAIL, by enclosing in a letter and remitting the amount attached to each work. To receive attention, letters and orders must in ALL CASES be addressed, POST PAID, to FOWLERS & WELLS, 131 Nassau st., New York.
